

# Treating Low Blood Sugar (Hypoglycemia)

## Step-by-Step:

1

**Symptoms include:** nervousness, dizziness, shakiness, headache, sweating, rapid heartbeat, confusion, nausea, and hunger.

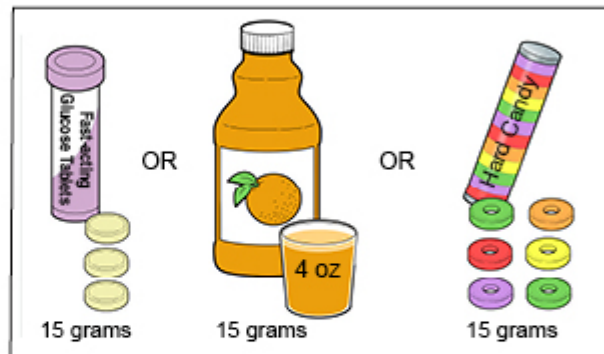

If you feel symptoms, check your blood sugar.

If your blood sugar is below 70 mg/dL, follow these steps to raise it.

2

Eat or drink 15 grams of fast-acting sugar.

3

Wait 15 minutes.

4

Check your blood sugar again.  
If needed, repeat steps 2 and 3.

5

If your blood sugar is back to normal (above 70 mg/dL), eat a snack or meal.

**If your blood sugar is still too low, call your healthcare provider.**
