

# Bronchitis

Today we are going to talk about Bronchitis.

Oh! I know how to draw one of those!

Uhh, no, not a brachiosaurus!

Bronchitis affects the bronchi - the airways in the lungs. It causes inflammation and makes more mucus, or phlegm, which is that yucky stuff you cough up sometimes.

Bronchitis is most often caused by a virus or bacteria, but it can sometimes be caused by things around us like allergens, chemical fumes, cigarette smoke and dust.
