

# Stopping Germs

Announcer It's time for...What's That Mean?

Announcer Today: Stopping Germs

Lana Everyone on your care team should sanitize their hands when they enter your room, and when they leave, to prevent the spread of germs from one patient to another.

Lana Sometimes staff wear masks and gowns too, when we need to be even more careful to prevent spreading certain germs.

Lucy We want kids to insist that everyone sanitize their hands. In fact, this is probably the best and easiest way to prevent the spread of germs.

Lucy Kids can be heroes by making sure everyone does the right thing.
