

Bone Marrow

Announcer It's time for...What's That Mean?

Announcer Today: Bone Marrow

Chron Did you know that the blood cells in your body only last about 100 to, oh maybe 120 days?

Neutrina So your body is always producing new blood cells to replace the old ones.

Chron Okay then. The spongy tissue inside certain bones - we call it "bone marrow." This is where the new blood cells are made.
