

Why does my baby cry?

“Babies can't talk. So, what we have to do is we have to look at their visual cues that they're giving us. And so, one of the things that some babies do is they cry. We hear babies cry. So why are babies crying? Sometimes they may be hungry. Others are dirty. They need their diaper changed. And so, one of the things we encourage moms and dads to do is to really watch their baby, learn their cues and everything.”
