

Heart Disease in Women

Heart Disease is the leading cause of death for women in the US.

Women are more likely to die from heart disease than from all forms of cancer combined.

Symptoms for heart disease in women can show up differently than in men.

Some women won't experience any symptoms at all, while others may have chest pain, nausea, vomiting, or fatigue.

Heart disease can lead to heart attack, arrhythmias, or heart failure.

Talk with your healthcare provider today about how you can lower your risk for heart disease.
