

Infection Prevention (Patients)

"Hello, I'm Dave and this is personal protective equipment, or PPE. Masks, gloves, face shields, all this stuff can be kind of annoying; it's like it gets in your way. OW!"

"It's kinda like this wall. It's gonna protect you from catching something that you don't want to catch."

"Oh hello. Do you want to catch this?"

"I don't want to catch that."

"Are you sure? Cause I've got it and I can throw it right to you?"

"Please don't."

"Alright... ACHOO!"

"Woah! Man."

"PPE. It's not just a one way street. It can also protect you from giving something to someone else."

"Don't give me that!"

"*Coughs* Uh oh."

"Hey hey hey! I don't need that... keep that over there. What are you doing? Pick it up, do something, don't just stand there!"

"The important thing is to wear the PPE how and when your health care team advises. Because protection is good for everyone."

"Did you catch it yet?"

"Come on little guy, come here! There you go."
